

Dear all

I hope this finds all well.

It was very late for "TSUYU" (the rainy season) to start in West Japan this year.

These days, I hope this year will be a summer without big disasters. ☺

By the way, we are steadily preparing for MF-TOKYO 2019, which will be held from 31st to August 3rd. Many new products are announced, and information on processing technology and equipment is abundant, so we would like you to come to the venue on this occasion!!

We look forward to seeing you at the venue!! ☺

For more info about MF-TOKYO 2019, please refer to this website.

<https://www.mf-tokyo.jp/e/>

This time, I will tell you about Japanese summer event called "Tanabata".

"TANABATA"

"Tanabata" is an event related to the stars. It is based on the legend that only once a year, Hikoboshi (Cow herder) and Orihime (Weaving Princess), two lovers, would be allowed to meet each other at the shores of the heavenly river. The moment would take place on the night of July 7th in the lunisolar calendar.

Hikoboshi and Orihime were husband and wife. They were so deeply in love with each other that they ended up neglecting their duties. As punishment, they were separated and only allowed to meet one another once a year.

If it rains on Tanabata night, the only chance when Hikoboshi and Orihime can meet in a year, the heavenly river will be flooded with rainwater. Both lover will become unable to meet each other.

On the night of 7th July of every year, people write their wishes on colorful paper strips and hang them on bamboo leaves.

If Hikoboshi and Orihime are able to meet each other in that year without problems, the wish you had written on the paper strip will come true.

In every region of Japan, there will be Tanabata festivals held a day before July 7th, and a day afterward. Would you like to come to Japan at this time and write your wishes on a colorful paper strip? Maybe a wish comes true... ☺

NESTING TOOL

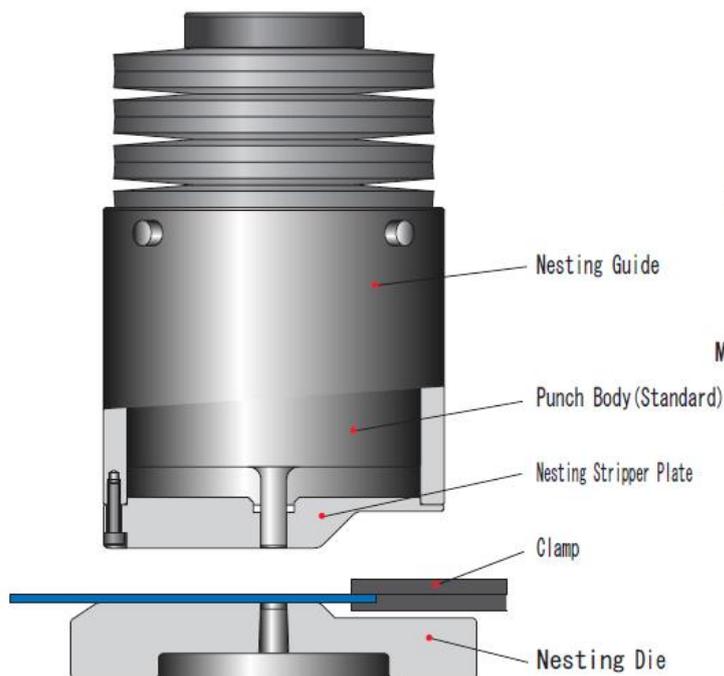

Improve your material utilization!

Nesting tool has relief from clamp holders.

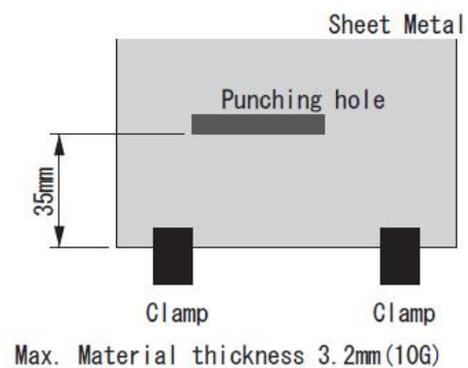

Therefore, operator minimized clamp holding material as little as possible.

You can improve material utilization so much.
