

NEWS

Dear all,

How are you guys doing? ☺

As you all know, COVID-19 is now widespread around the world.

As a result, the Tokyo Olympic and Paralympic Games 2020, which was reported in the previous CONIC NEWS, has been postponed to the next year.

Such a situation has never been before.

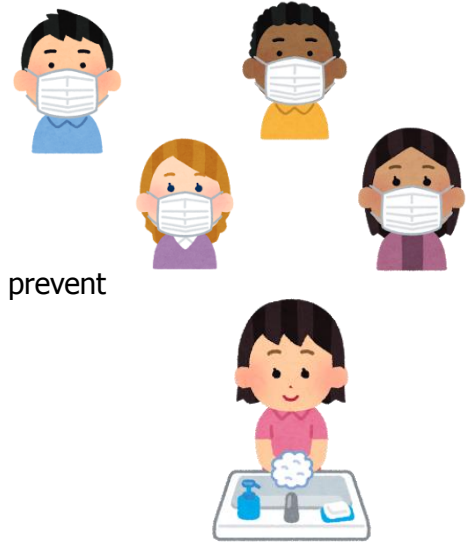

It is very unfortunate, but it is the most important to be prepared to prevent infection now while expecting to be able to hold it next year.

“Winter always turns to spring” So NEVER DESPAIR!! ☺

But please don't forget to take good care of yourself!

Wash your hand well and put mask on.

Don't go out if you don't have the urgent need!

In this talk about Japanese culture, I will explain the Japanese school term system in the spring. ☺

The new school year usually begins in April after spring vacation at school in Japan.

The first term runs until the middle of July.

Students return to school at the beginning of September for the second term after summer vacation ends. And the final term begins in early January and continues to late March after they have winter vacation which lasts for 2-3 weeks (depending on areas).

Why does the Japanese school year start in April?

The Meiji Restoration introduced western education and the enrollment in September became the mainstream in higher education in the early Meiji era (1868-1912).

After that, however, the fiscal year of Japanese government was changed from April to March of the following year, and then, elementary schools were recommended to have the enrollment in April to adjust. Since then, enrollment in April has been gradually becoming established and lasts up until now.

CONIC LONG LIFE PUNCH (CLP)

Latest steel grade & custom engineered for all purpose

Most efficient in Long tool life and cost!

*High performance for all purpose, especially for mild steel, galvanized steel with high corrosion resistance!
Special shapes are also available for this treatment.*

◇ Feature

3 times hit ratio in our company's comparison

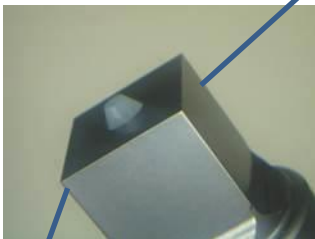

Increased number of hits

Increased products quality

Reduced burrs by high wear resistance

Eliminates inferior goods and machine down time

Stable processing without problem

Latest steel grade selected carefully / anti chipping

Strong durability (HV3,000 ~ 3,500) / 100% better wearing

Coating depth is 2~3μ

Dark gray color

In the environment where high speed processing and a great variety of sheet metals circulate, our duty is to realize "High profit punching process" for all of CONIC customers.

■ Surface treatment (Feature)

Total performance	Punch type	Appropriate Material			
		Stainless	Mild steel	Aluminum	Galvanized
	Super Dry Punch (SDP)	★★★★★	★★★★★	★★★	★★★
	Heavy Duty Punch (HDP)	★★★★★	★★★★★	★★★★★	★★★★★
	Conic Long Life Punch (CLP)	★★★★	★★★★	★★★★★	★★★★★
	Conic Hard Punch (CHP)	★★★	★★★★	★★★★★	★★★★
	M2···No surface treatment	★★	★★★	★★★	★★★
Cost Performance	D2···No surface treatment	★	★	★★	★
