

# Low-height upward burring die

This tool is designed for lowering the top of the die height. Therefore it is trouble free from interfere with next tools.

Normally Upward Burring Die height is much higher than standard Punching Tool Die.

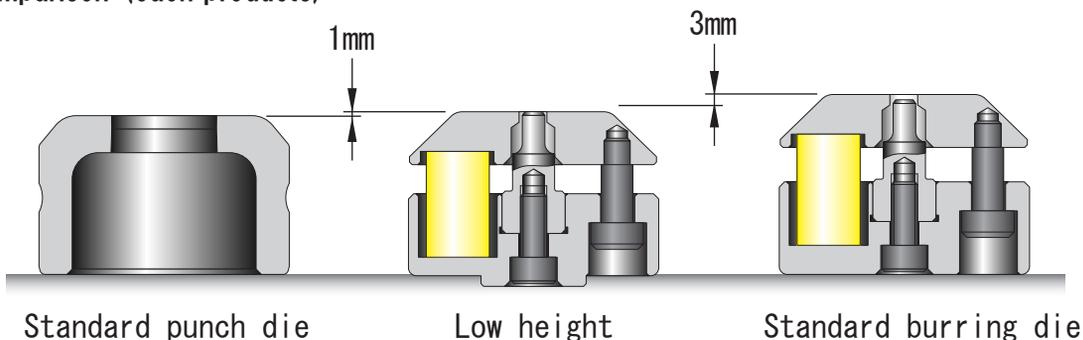

Sometimes material got a crescent mark due to tool height difference.

This tool die is designed lower than standard Burring Tool Die so that, it will avoid interference of material and Die.

Low-height burring die is just 1mm higher than standard punching tool. Therefore it is possible to punch next of burring tool also avoid scratch from material movement and turret rotation.

## ■Comparison (each products)

Note: Maximum thickness of material is 1mm. Stainless steel does not fit to this application.
