

Dear all,

How are you all doing? ☺

In Japan, November 7th is called "Rittou" in the Japanese calendar.

From this day on, the calendar turns to winter.

Also, November is called "Shimotsuki" in the Japanese calendar.

It means that the season has become cold enough to cause frost.

As the weather gets colder, it is easier to catch a cold.

Don't forget to gargle and wash your hands, and take care of yourself. ☺

"Bunka-no-Hi" (Culture day)

"Bunka-no-Hi" means "Culture Day" in Japanese.

This day is a national holiday annually celebrated in Japan on November 3, and the purpose of this holiday is to promote our culture by loving freedom and peace. It was established in 1946.

November 3rd was originally celebrated as the Meiji Emperor's birthday.

Additionally, the Japanese Constitution was proclaimed in this day.

Culture Day was established as a national holiday in commemoration of the birthday of Emperor Meiji and proclamation of the Japanese Constitution.

In Culture Day, the Order of Culture is awarded to people

for their distinguished service to society in various fields at the Imperial Palace.

Various kinds of cultural events are also held by schools and communities on this day.

Do you have Culture Day in your country?

SUPER FIT GUIDE

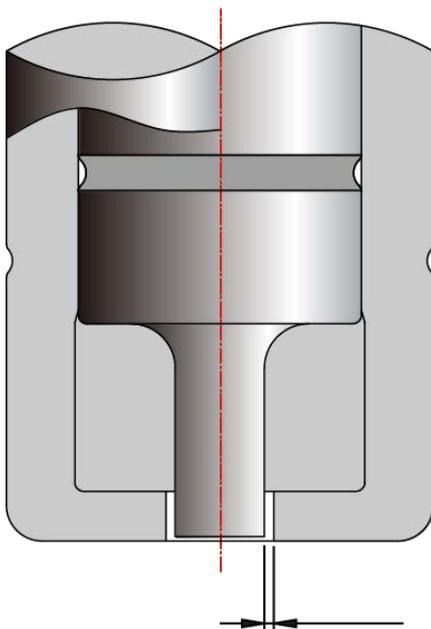

※For NC 1/2" & 1-1/4

This tool is recommended for the stable processing of plates with protective sheets!

〈Examples of problems specific to materials with protective sheets〉

- ① "Slug pulling" caused by the protective sheet not being cut securely.
- ② The slug and adhesive component of the protective sheet enter the guide through the gap between the guide hole and the punch blade edge.

Measure Tools

This is the POINT!

① SHAPE CORRESPONDING

Round, Standard square shape (Square, Rectangle, Obround, SD, WD), Square with radius, Rectangle with radius.

*Please ask us about special shapes and punches made by other companies.

② SPECIFICATIONS

- In principle, it corresponds to standard punch (Non-air blow).
- Please contact us as some surface treatment punches are not supported.

[SUPPORTED PRODUCT] Heavy duty punch (HDP), Conic long life punch (CLP), Conic hard punch (CHP).

[UNSUPPORTED PRODUCT] Supper dry punch (SDP)

Minimizing the gap between the guide holes ensures stable cutting of the protective sheet!

Advice on one point!

By making the die clearance 30%-40% narrower than normal, the cutting power of the protective sheet will be improved. However, it is recommended that you select a tool that is resistant to wear, such as M2 punches, because it is burden on the tool.
