

Dear all,

How is everything?

Little by little, the sunset time is getting faster.

Now is the time to feel the deep fall in every rain also.

Today, I will tell you about Japanese culture called "OTSUKIMI".

## OTSUKIMI ~Moon Viewing Festival~

Japan is well known for its seasonal customs and events.

One of the most popular events in autumn is "Otsukimi".

The moon of this day is called Jugoya (the 15th night),

Imo-meigetsu (potato harvest moon), and Chushu-no-meigetsu

(mid-autumn moon). Dango (rice dumplings), susuki (Japanese pampas grass),

and seasonal food such as sweet potatoes are displayed as offerings when viewing the moon.

The tradition originally came from China. It first arrived in Japan during the Heian period.

Japanese aristocrats gathered to recite poetry under the full moon of August 15th by the

traditional Japanese calendar. Later it was spread further among common people.

As it was held in the harvest season, it became an autumn thanksgiving event.

Susuki symbolize Yorishiro, the object where the moon divine spirit resides.

There is a saying that hanging used susuki from eaves prevents illness for a year, because people believe that these susuki can ward off evil spirits.

Potatoes are offered to express gratitude for a good harvest, because they are harvested at that time.

By the way, in Japan, the moon resembles a rabbit pounding mochi rice with a hammer, they say.

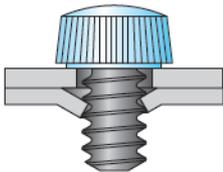

What does the moon look like in your country? ☺

# One Pitch Burring Tool

This tool designed for cover or surface plate fastening which is not necessary strong fastening force.

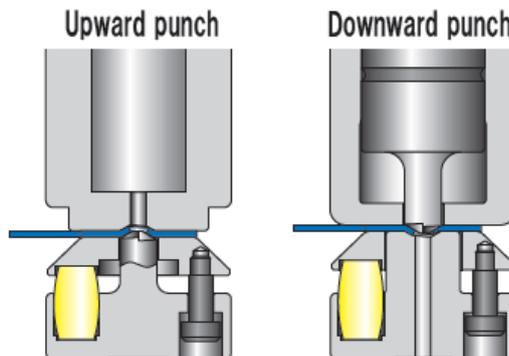

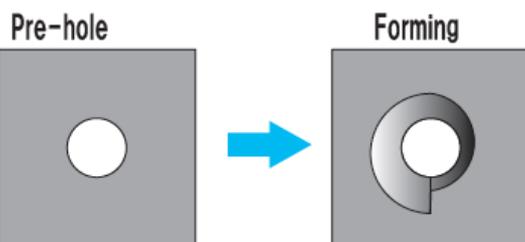

## One pitch burring

- Forming just one pitch female screw thread by using punch press.
- Pre-hole punch first then forming thread.
- High speed punching press compared to tapping process.
- Various kinds of material thickness can be punched with same tool if screw size is the same. (Height adjustment is necessary)

Punch process

## Tool specification

### ■ Station size

Machine type	Station size
Thick turret tooling Thin turret tooling	1-1/4"
Murata 114	C or D
Nissinbo	B

### ■ Thickness

Screw size	Thickness
M3	0.6t~0.8t
M4	0.6t~1.2t
M5	0.6t~2.0t
M6	0.6t~2.0t
M8	0.6t~2.3t

\* TYPICAL APPRICATION \*

### Lighting Fixture Cover

Reason: Not so much toughness and use thin sheet metal.
